

The Future of Urban Gardening

Tower Gardens

Indoor and Outdoor Gardening—21st Century Style PERFECT PRODUCE, USING LESS WATER

- No Dirt
- 90% Less Water
- 90% Less Space
- No Gardening Experience is Necessary
- Produce Tastes Better
- Produces Grows to Maturity in Less Time Than It Takes in Soil
- Saves Money Over Store Bought Produce
- 100% Success

The Tower Garden is a vertical aeroponic growing system. It grows almost any vegetable, herb, or flower, and many fruits.

The produce one gets from a Tower Garden is much tastier than store-bought produce because it grows to perfect ripeness and is picked right when one is ready to eat it.

Tower Gardening uses less than 10% of the water and space than does traditional soil gardening. And, unlike gardening in soil which may be deficient in minerals, Tower Garden produce is well supplied with minerals and trace minerals in a perfect balance.

The Tower Garden is perfect for rooftops, patios, balconies, terraces—just about any relatively sunny place outside.

With accessories, such as thermal blankets and heaters it can grow produce outdoors even when nights drop below freezing.

Additionally, when placed indoors near a window, or especially with grow lights, the Tower Garden can grow delicious vegetables, herbs and many fruits year round.

And, finally, with solar power your Tower Garden can go off the grid.

The Tower Garden Kit includes everything you need to get started gardening, including minerals,

Indoors or outdoors, using Tower Gardens is an ideal way to become a great gardener. With Tower Gardening you never worry about weeds or poor quality soil.

HOW A TOWER GARDEN WORKS

Plants in a Tower Gardens receive mineral enriched water at 15 minute intervals throughout daylight hours. The water is pumped to the top of the tower from the reservoir base and then gravity fed (gently falls or sprinkles down) to each plant root ball.

Maintenance consists of periodically refilling the basin reservoir with water and adding minerals and pH adjusters (you have precise control over the water, which enables year-round, healthy, perfect plants).

The plants you put into your Tower Garden can be grown from seeds or you can buy seedlings from a vendor.

For more info, call Kent Hinkson at 801.369.9773 or buy from the vendor at Kent.TowerGarden.com.
